

## GPS Units for Adventure Motorcycles

Navigating with a GPS allows you to explore with confidence on your adventure motorcycle. The GPS specialists at Touratech-USA have a few things they suggest you consider when selecting a GPS solution:

- For organized rides like the Continental Divide, Backcountry Discovery Routes, or tracks from other riders, choose a GPS with Track Log Navigation.
- Choose a motorcycle-specific GPS unit because they are ruggedized internally and are waterproof. (automotive units will not last)
- To listen to XM radio, music, or integrate with your cell phone, choose a unit with MP3 and Bluetooth capability.
- The options can be overwhelming, so Touratech has put together a chart to compare features between Motorcycle GPS units.

*Use this chart to decide which GPS Package is best for you:*
